DETAILED ACTION

Response to Arguments

Applicant's arguments, see "remarks" pages 4-6, filed 29 January 2008, with respect to claims 1-77 have been fully considered and are persuasive. The "non-final rejection" of 30 July 2008 has been withdrawn.

Response to Amendment

An "Amendment" was received on 29 January 2008, in response to Office Action of 30 July 2008. Claims 1-71 have been cancelled and claim 72-77 have been newly added.

Allowable Subject Matter

Claims 72-77 are allowed.

The ion trap mass spectrometer configuration was not found in a prior art search. The search failed to show or suggest the prior use of:

- The vacuum chamber housing comprising: a lid having an interior surface coupled with an ion trap, an exterior surface coupled to an analysis component wherein the analysis component and the ion trap are in fluid communication with each other and a second position to decouple the lid and all analysis components coupled to the lid from the base and provide the ion trap component wholly outside the vacuum chamber volume in configuration with the limitations of claim 1.

The following is an examiner's statement of reasons for allowance:

In regards to claim 72, prior art fails to disclose an ion trap mass spectrometer comprising: a vacuum chamber housing comprising a lid and a base, the lid and the base defining a vacuum chamber volume, and the base comprising at least one wall configured to couple with the lid, wherein the lid comprises: an interior surface configured to define an interior wall of the vacuum chamber and an exterior surface configured to couple with an analysis component; and a first opening extending through the lid from the analysis component to the interior surface; an ion trap mass separation component coupled to the interior surface of the lid without being coupled to the base and configured to perform at least some operations with respect to mass separation for use in mass spectrometry, wherein the first opening provides fluid communication between the ion trap and the analysis component; wherein the lid is configured to be removably operably coupled with respect to the base and positioned in a first operable position to seal with the base and provide the ion trap component wholly within the vacuum chamber volume, and a second position to decouple the lid and all analysis components coupled to the lid from the base and provide the ion trap component wholly outside the vacuum chamber volume.

Claims 73-77 allowed by virtue of their dependencies on the independent claim 72.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pertinent prior art is closely related art that individually or in combination could be considered grounds for rejection. See references cited for a listing of the pertinent prior art found and the prior art found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
